

Arctic Ash Stone, Kiama NSW

## Resin Bound Stone

Give your pool surrounds a face lift! StoneSet is a great looking, high value, long-lasting solution to resurface existing paving, whether it be cracked, worn or even plain concrete.

Resurfacing pool surrounds with StoneSet ensures no puddles that otherwise pose slip hazards and longer term water based erosion.

Fawceter Towers Rooftop, St Kilda VIC

## Ideal Resurfacing

- Old Tile, cracked paving, loose pebble.. + more!
- Unaffected by harsh UV, salt and chlorine
- Porous surface = No puddles, less black spot algae
- Soft Underfoot with high non-slip rating
- Resurface, reuse - No Landfill costs
- Flexible resin avoids future cracking
- Driveways, pathways.. even binder for loose gravel

### Soft Underfoot with high non-slip rating

StoneSet use a blend of smaller stone for pool surrounds, trowelled flat to ensure the surface finish is soft under foot. Unlike cement based pebble, porosity and polyurethane mean significantly less aggregate that comes loose over time.

### Unaffected by harsh UV, salt and Chlorine

Natural stone does not lose its colour with UV exposure. Unlike cement based grout lines, the hard binding polyurethane resin is not prone to water ingress and erosion. Nor do the harsh chemicals used to sanitise the pool erode the binder. StoneSet has even been permanently submersed like this at water parks.

### Loose, worn pebble

### Porous Surface

When StoneSet is applied at 16mm over your existing pool surrounds, the surface is water porous. No puddles means multiple advantages no slip hazards, less algae, staining and mosquitos.

### Easily resurface any hard surface

With a modest 16mm minimum thickness, Stoneset is a product with one of the thinnest topping application on the market.

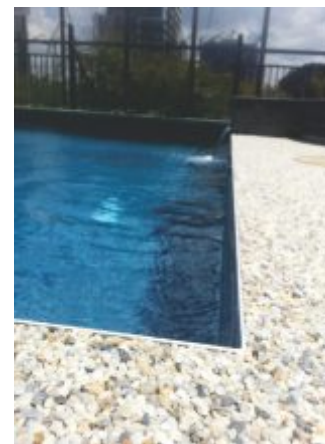

Resurface practically any hard surface without drastically affecting your existing levels, stairs and pool coping.

### Zero Maintenance

StoneSet retains it look and colour, with a 10 year guarantee of no loose stone, no sealer, no erosion or repairs required like drummy tiles.

### Other Considerations

StoneSet is only suitable for horizontal surfaces. It is not typically used for pool lining. It is preferable to use your existing pool coping, however aluminium angle (right) can be applied over old coping. Angle is used to create hard edging and often cater for skimmer boxes using tree-collar style rings to allow access.
